Notice: While JavaScript is not essential for this website, your interaction with the content will be limited. Please turn JavaScript on for the full experience. Python 3.0 is end-of-lived with the release of Python 3.1. All users of Python 3.0.x should upgrade to the most recent version of Python 3; please see the downloads pages. Python 3.0 has been replaced by a newer bugfix release of Python. Please download Python 3.0.1 instead. Python 3.0 final was released on December 3rd, 2008. Python 3.0 (a.k.a. "Python 3000" or "Py3k") is a new version of the language that is incompatible with the 2.x line of releases. The language is mostly the same, but many details, especially how built-in objects like dictionaries and strings work, have changed considerably, and a lot of deprecated features have finally been removed. Also, the standard library has been reorganized in a few prominent places. Here are some Python 3.0 resources: Please report bugs at Windows 環境下で Python 環境を再び構築する機会があったので、テスト投稿と備忘録を兼ねて環境構築の手順をまとめてみました。他の皆さんがわかりやすく「まとめてたりするのですが、練習ということでご了承ください。想定する読者さんこれから Python をインストールしたいよって人 プログラミングをはじめてみたいよって人 Windows 7 (おそらく 8 も) に Python 環境を構築する。 numpy, scipy, matplotlib のインストール。 環境が構築できているかたしかめる。 64 bit 版 Windows 7 Professional\*\* 32 bit 版 人は 32 bit 版のものをインストール Windows に標準で導入されているコンソールプロンプト はじめに、python Japan にアクセスして、Python 2.x 系をダウンロードします。直接 python.org にアクセスしてもよいです。ダウンロード先にトンだらページを下までスクロールします。Files にたどり着くと思うので、該当するファイルをクリックして下さい。ダウンロードが終わったら、インストーラを起動して、道なりに進めていきます。Next > を 2 回クリック。▼をクリックすると、will be installed on local hard drive と表示されるので、それをクリックする。 これをしておく、後々 "PATH を通す" という PC に Python の場所を教える作業を省略できます。(←便利だね！) 最後で行ったら、Finish を押して、インストールを完了します。 Python のバージョンには、2.x 系と 3.x 系があります。 徐々に 2.x 系から 3.x 系に移行が進んでいますが、一般的には 2.x 系が広く使われており、サグートを受けやすく対応するパッケージも多いので、2.x 系を前提として環境構築していきます。(参考) 1. Python for Windows インストールメモ 2. Windowsへのインストール 2. python と pip が動作するが確認する アクセザリなどよい、コマンドプロンプトを起動してください。以下のヘルプを表示するコマンドを入力してみてください。 pip のヘルプが表示されたら成功です。 freeze というリストを表示するコマンドがあるのですが、後で使います。 3. Numpy や Scipy など入れておく便利なパッケージのインストール ここからは、入れておく便利なパッケージのインストールを行っています。以下のコマンドはまずエラーが出るであろう。 たぶんエラーが、error: Microsoft Visual C++ 9.0 is required (Unable to find vcvarsall.bat) の類であれば、stackoverflow に投稿された質問 (error: Unable to find vcvarsall.bat) で解決できそうな気がしますけどメンドイのでやめました。 そのため、偉大な先人である Christoph Gohlke さんのインストーラを拝借しましょう。 とても簡単です。 感謝！ Unofficial Windows Binaries for Python Extension Packages リンクにトぶと、以下のページが表示されると思います。 この中から、Numpy と Scipy を探し出しましょう。 "CTRL + F" を押して "numpy" や "scipy" で検索をかけてもOKです。 下に行く、NumPy のダウンロードのページにたどり着きます。 今回は、Python 2.7 を使用しているの、64 bit 版のインストーラをダウンロードして下さい。 32 bit 版やその他は、対応するインストーラを選んで下さい。 SciPy も同様にダウンロードしましょう。 ダウンロードし終えたら、インストーラを起動して、適当に Next を押してはいれインストールされます。 最後に、パッケージがインストールされていることが前提です！ pip を使ってインストールします。 コマンドプロンプトを立ち上げて、以下のコマンドを入力してみてください。 インストールに成功したら、以下のコメントが表示されるはずです。 Successfully installed matplotlib pyParsing python-dateutil pytz six Cleaning up... 4. パッケージがインストールし直して下さい。 matplotlib==1.4.2 numpy==1.9.1 pyParsing==2.0.3 python-dateutil==2.3 pytz==2014.10 scipy==0.15.0 six==1.9.0 実際に動作するかも確かめてみましょう。 以下のコマンドを立てて実行してみてください。 エラーが出なければOKです。 >python >>> import numpy >>> import scipy >>> import matplotlib >>> ^?最後の ^? は "Ctrl + ?" のように入力しています。これを入力すると、python を終了することができず、イメージとしては、こんな感じでしょう。 あとがき 上の手順でうまくいかなければ、コメント等で僕まで教えて頂けると嬉しいです。 アドバイスやご指摘なども歓迎します。 わいー Notice: While JavaScript is not essential for this website, your interaction with the content will be limited. Please turn JavaScript on for the full experience. Release Date: March 10, 2020 Note: The release you are looking at is Python 3.7.7, a bugfix release for the legacy 3.7 series which is now in the security fix phase of its life cycle. See the downloads page for currently supported versions of Python and for the most recent source-only security fix release for 3.7. The final bugfix release with binary installers for 3.7 was 3.7.9. The Python 3.7 series contains many new features and optimizations. Please see What's New In Python 3.7 for more information. The binaries for AMD64 will also work on processors that implement the Intel 64 architecture. (Also known as the "x64" architecture, and formerly known as both "EM64T" and "x86-64".) There are now "web-based" installers for Windows platforms; the installer will download the needed software components at installation time. There are redistributable zip files containing the Windows builds, making it easy to redistribute Python as part of another software package. Please see the documentation regarding Embedded Distribution for more information. Please read the "Important Information" displayed during installation for information about SSL/TLS certificate validation and the running the "Install Certificates.command". As of 3.7.7, we provide one installer: 64-bit-only that works on macOS 10.9 (Mavericks) and later systems. The deprecated 64-bit/32-bit installer variant for macOS 10.6 (Snow Leopard) is no longer provided. As of 3.7.7, macOS installer packages are now compatible with the full Gatekeeper notarization requirements of macOS 10.15 Catalina including code signing. Full Changelog Release Date: Oct. 5, 2020 This is the stable release of Python 3.9.0 Note: The release you're looking at is Python 3.9.0, a legacy release. Python 3.10 is now the latest feature release series of Python 3. Get the latest release of 3.10.x here. Installer news This is the first version of Python to default to the 64-bit installer on Windows. The installer now also actively disallows installation on Windows 7. Python 3.9 is incompatible with this unsupported version of Windows. Major new features of the 3.9 series, compared to 3.8 Some of the new major new features and changes in Python 3.9 are: PEP 573, Module State Access from C Extension Methods PEP 584, Union Operators in dict PEP 585, Type Hinting Generics in Standard Collections PEP 593, Flexible function and variable annotations PEP 602, Python adopts a stable annual release cadence PEP 614, Relaxing Grammar Restrictions On Decorators PEP 615, Support for the IANA Time Zone Database in the Standard Library PEP 616, String methods to remove prefixes and suffixes PEP 617, New PEG parser for CPython BPO 38379, garbage collection does not block on resurrected objects; BPO 38692, os.pfdiff open added that allows process management without races and signals; BPO 39926, Unicode support updated to version 13.0.0; BPO 1635741, when Python is initialized multiple times in the same process, it does not leak memory anymore; A number of Python builtins (range, tuple, set, frozenset, list, dict) are now sped up using PEP 590 vectorcall; A number of Python modules (abc, audioop, bz2, codecs, contextvars, crypt, functools, json, locale, operator, resource, time, weakref) now use multiphase initialization as defined by PEP 489; A number of standard library modules (audioop, ast, grp, hashlib, pwd, posixsubprocess, random, select, struct, termios, zlib) are now using the stable ABI defined by PEP 384. You can find a more comprehensive list in this release's "What's New" document. More resources And now for something completely different Wapcaplet: (John Cleese) Welcome! Do sit down. My name's Wapcaplet, Adrian Wapcaplet. Mr. Simpson: how'd'y do. Wapcaplet: Now, Mr. Simpson... Now, I understand you want us to advertise your washing powder. S: String. W: String, washing powder, what's the difference. We can sell anything. S: Good. Well I have this large quantity of string, a hundred and twenty-two thousand miles of it to be exact, which I inherited, and I thought if I advertised it... W: Of course! A national campaign. Useful stuff, string, no trouble there. S: Ah, but there's a snag, you see. Due to bad planning, the hundred and twenty-two thousand miles is in three inch lengths. So it's not very useful. W: Well, that's our selling point! 'SIMPSON'S INDIVIDUAL STRINGGETTES!' S: What? W: THE NOW STRING! READY CUT, EASY TO HANDLE, SIMPSON'S INDIVIDUAL EMPEROR STRINGGETTES! JUST THE RIGHT LENGTH! S: For what? W: A MILLION HOUSEHOLD USES! S: Such as? W: Uhmm... Tying up very small parcels, attaching notes to pigeons' legs, uh, destroying household pests... S: Destroying household pests? How? W: Well, if they're bigger than a mouse, you can strangle them with it, and if they're smaller than, you flog them to death with it! S: Well surely!... W: DESTROY NINETY-NINE PERCENT OF KNOWN HOUSEHOLD PESTS WITH PRE-SLICED, RUSTPROOF, EASY-TO-HANDLE, LOW CALORIE SIMPSON'S INDIVIDUAL EMPEROR STRINGGETTES, FREE FROM ARTIFICIAL COLORING, AS USED IN HOSPITALS! Full Changelog

2020-8-8 · 1. 先勾选Add Python 3.7 to PATH,再点击Customize installation 自定义 安装 不改变默认进行Next下一步 先点击Install for all users, 记住 安装 位置 ( 此位置也可以自定义 ) , 点击Install开始 安装 安装 成功, 点击Close关闭 7. 手动添加路径- windows 10, 如果忘记勾选添加路径 ... 2021-3-1 · 本次安装的包括: Anaconda3 2021.11+Python 3.9.7+TensorFlow 2.6.0+PyCharm 2021.3.1 备注: ( PyCharm已经支持TensorFlow ), 所以可以不使用Anaconda安装了 ) 安装环境: Windows 10 家庭版 , 以上4款软件均未安装 Python 3.7.3. Release Date: March 25, 2019. ... Windows users. ... The default variant is 64-bit-only and works on macOS 10.9 (Mavericks) and later systems. We also continue to provide a 64-bit/32-bit variant that works on all versions of macOS from 10.6 (Snow Leopard) on. Use the 10.9 64-bit-only installer variant unless you are building ... 2016-1-3 · Python V3.7, for x64 (Python编程开发工具)官方安装版。一种面向对象、直译式计算机程序设计语言，也是一种功能强大而完善的通用型语言。话说Python界面出现了Python女神，程序员们快来加入Python吧 2019-4-2 · It instructs Windows to look through all the PATH folders for "python" and find the install folder that contains the python.exe file. 1. Open the Start menu and start the Run app. 2. Type sysdm.cpl and click OK. This opens the System Properties window. 3. Navigate to the Advanced tab and select Environment Variables. Stable Releases, Python 3.10.4 · March 24, 2022. Note that Python 3.10.4 cannot be used on Windows 7 or earlier. Download Windows embeddable package (32-bit) Download Windows embeddable package (64-bit) Download Windows help file. Download Windows installer (32-bit) Download Windows installer (64-bit) Python 3.9.12 · March 23, 2022. Note: The release you are looking at is Python 3.7.0. ... There are now "web-based" installers for Windows platforms; the installer will download the needed software components at installation time. ... For 3.7.0, we provide two binary installer options for download. The default variant is 64-bit-only and works on macOS 10.9 (Mavericks) and ...
